In the old days, Turbo Pascal introduced another syntax for class-like functionality, using the object keyword. It's somewhat of a blend between the concept of a record and a modern class. The old-style objects can be allocated / freed, and during that operation you can call their constructor / destructor.

Modern Object Pascal Introduction for Programmers

The Shape1 and Shape2 objects are being created using new as a function, passing it two parameters: (1) the type name and (2) the name of the Init constructor and returning a pointer to the object. The second way is using new as a procedure with the desired variable (Rectangle in this case) to be to be created and the constructor name as parameters.
