What Is Chromatography Paper

Chromatography is used to separate mixtures of substances into their components. All forms of chromatography work on the same principle. They all have a stationary phase(a solid, or a liquid supported on a solid) and a mobile phase(a liquid or a gas).

paper chromatography - chemguide

Paper chromatography uses paper as the stationary phase. type of paper used is important. Filter paper is one of the best types, although paper towels and even newspaper can also be used. Writing paper is coated so that ink does not run and because of this is less satisfactory. Of course, wax paper, not being absorbant,

PAPER CHROMATOGRAPHY

Paper and thin-layer chromatography have been used to sort and identify pigments, amino acids, and many different kinds of organic molecules. Because it is so simple to set up a paper chromatography experiment, this is one of the first laboratory techniques presented in science courses. Other Forms of Chromatography
